y/o with severe back pain. He had x-ray of cervical spine done 2017 which indicated degenerative retrolisthesis and degenerative change at C3-C4 and C5-C6 produces mild bony central canal and moderate to severe bilateral neural foraminal narrowing. He also had a MRI done in 2016 - L1-2: Diffuse disc bulge and mild facet arthropathy produce mild spinal canal and moderate bilateral neural foraminal stenosis.

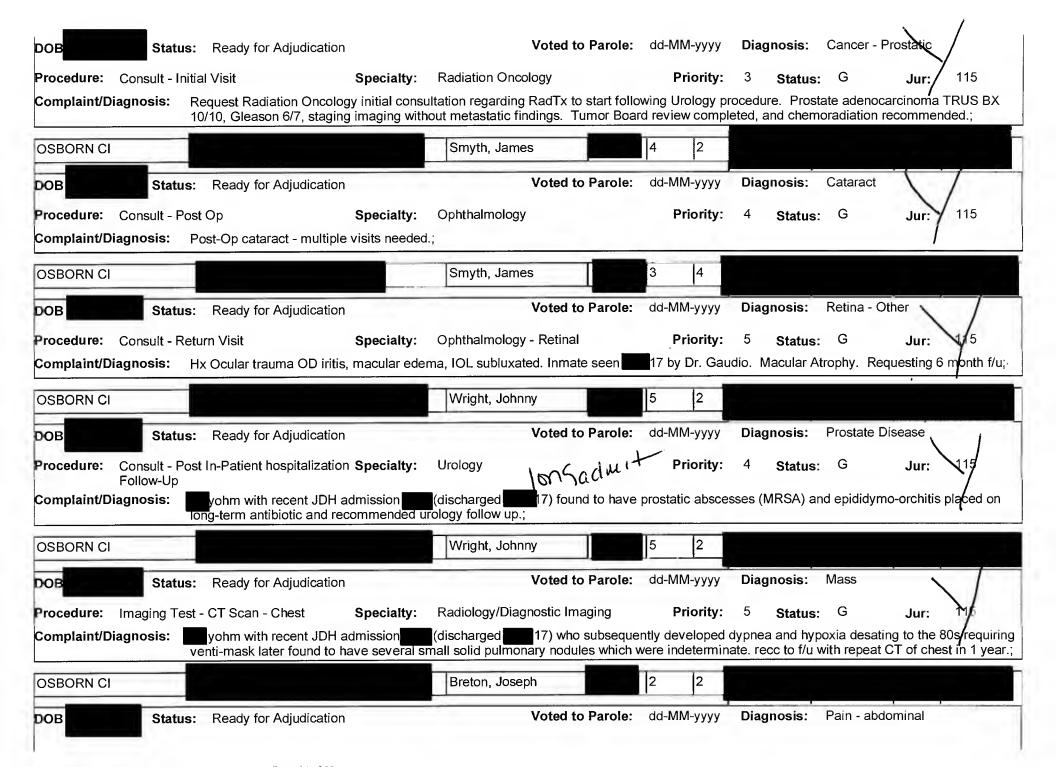

L2-3: Diffuse disc bulge and facet arthropathy produce mild spinal canal and mild bilateral neural foraminal stenosis. L3-4: Diffuse disc bulge and facet arthropathy produce mild spinal canal and mild bilateral neural foraminal stenosis. L4-5: Diffuse disc bulge and facet arthropathy produce mild spinal canal

stenosis with mild right and moderate left neural foraminal stenosis. L5-S1: Diffuse disc bulge, superimposed central to right central disc extrusion and mild facet arthropathy produce moderate right-sided spinal canal and moderate bilateral neural foraminal stenosis. Disc material abuts the traversing right S1 nerve root. He is currently on Tylenol # 3 two tabs BID and Lyrica 100mg BID. Pain level is between 8 and 10. When he lays down and sits he experiences throbbing, burning pain. He exhibits left lower extremity weakness, Left patellar reflex is 1+, right is 2+. He has decreased ROM - he can bend his shoulders forward. He denies bowel and bladder incontinence.;
